The allure of leather is once again gaining ground as small labels and brands produce functional pieces reflective of our lifestyles. A clear antithesis to disposable culture, well-crafted leather goods can and should last for decades. This book is a practical introduction to this ancient art form with 20 distinct projects to sink your awl into. From creating simple braids and key rings to belts, wallets, mobile phone cases and leather totes, one could literally outfit themselves from head to toe. Covers all the basics from gluing and polishing to using the specialized tools and sewing by hand. As the son of one of Swedens leading shoemakers, the author has a lifelong knowledge of working with leather and his knowledge and respect for the material shines through.

This book gathers selected research papers presented at the International Conference on Communication and Intelligent Systems (ICCIS 2019), organised by Swami Keshvanand Institute of Technology, Management & Gramothan (SKIT), Jaipur, India and Rajasthan Technical University, Kota, India on 9-10 November 2019. This book presents a collection of state-of-the-art research work involving cutting-edge technologies for communication and intelligent systems. Over the past few years, advances in artificial intelligence and machine learning have sparked new research efforts around the globe, which explore novel ways of developing intelligent systems and smart communication technologies. The book presents single- and multi-disciplinary research on these themes in order to make the latest results available in a single, readily accessible source.

Leave nothing to chance. This cliché embodies the common belief that randomness has no place in carefully planned methodologies, every step should be spelled out, each i dotted and each t crossed. In discrete mathematics at least, nothing could be further from the truth. Introducing random choices into algorithms can improve their performance. The application of probabilistic tools has led to the resolution of combinatorial problems which had resisted attack for decades. The chapters in this volume explore and celebrate this fact. Our intention was to bring together, for the first time, accessible discussions of the disparate ways in which probabilistic ideas are enriching discrete mathematics. These discussions are aimed at mathematicians with a good combinatorial background but require only a passing acquaintance with the basic definitions in probability (e.g. expected value, conditional probability). A reader who already has a firm grasp on the area will be interested in the original research, novel syntheses, and discussions of ongoing developments scattered throughout the book. Some of the most convincing demonstrations of the power of these techniques are randomized algorithms for estimating quantities which are hard to compute exactly. One example is the randomized algorithm of Dyer, Frieze and Kannan for estimating the volume of a polyhedron. To illustrate these techniques, we consider a simple related problem. Suppose S is some region of the unit square defined by a system of polynomial inequalities:  $\pi(x, y) \sim 0$ .

Cop and conjurer of demons, she's a woman in danger of losing control-to a power that could kill. . . . Why me? Why now? That's what Beaulac, Louisiana, detective Kara Gillian was asking herself when an angelic creature named Rhyzkahl unexpectedly appeared during a routine summoning. Kara was hoping to use her occult skills to catch a serial killer, but never had she conjured anything like this unearthly beautiful and unspeakably powerful being whose very touch set off exquisite new dimensions of pleasure. But can she enlist his aid in helping her stop a killer who's already claimed the lives-and souls-of thirteen people? And should she? The Symbol Man is a nightmare that the city thought had ended three years ago. Now he's back for an encore and leaving every indication on the flesh of his victims that he, too, is well versed in demonic lore. Kara may be the only cop on Beaulac's small force able to stop the killer, but it is her first homicide case. Yet with Rhyzkahl haunting her dreams, and a handsome yet disapproving FBI agent dogging her waking footsteps, she may be in way over her head. . . .

A dual memoir tells the alternating stories of a pair of identical twin sisters, a schizophrenic and a psychiatrist, in an account that traces their childhoods, the deterioration of the favored sister into mental illness, and the other's emergence from her troubled sibling's shadow into a successful career. Reprint. 20,000 first printing.

Don't Close Your Eyes. Sophie Cavanaugh is not going to let her freak of a cousin's strange psychiatric condition ruin high school for them both. Not after all the work she's put into cultivating the right look, and friends, and reputation. But then, Sophie sees something so frightening she lets out a blood-curdling scream-and finds herself stuck in a bizarre parallel world where nothing is safe and deadly creatures lurk just out of sight, waiting for her to close her eyes and sleep...forever. Could this world be real? Or does insanity run in the family...?
