Many types of waves exist, including electromagnetic waves and mechanical waves.

Waves move in different ways and have different properties. Part 1 In the diagram below, identify the parts of a wave by using the provided definitions.

medium traveled.

That is the energy is transferred from one particle to another. If there was no particle, there would be no energy transfer.

Electromagnetic waves. Waves that travel without the help of a medium are called electromagnetic waves.

Wave is a disturbance that travels, or propagates, without the transport of matter. Examples: sound/ultrasonic wave, EM waves, and earthquake wave. Mechanical waves, such as water waves or sound waves, travel within, or on the surface of, a material with elastic properties.
